

A design document, giving the overall structure of your solution, showing the **classes** and **methods** as a diagram or table, with **a brief (one sentence) description of the intention** of each.

<b>Class:</b> <i>accounts</i>	
<b>Intention:</b> The class to store account information including balance	
Methods	Intentions
<i>accounts(int number, long balance, String name)</i>	Constructor for the accounts class, set values to local attributes
<i>setBalance(double number)</i>	Call by other class in order to modify the balance
<i>getAccountNumber()</i>	Return the account number
<i>getAccountBalance()</i>	Return the account balance
<i>getAccountName()</i>	Return the account name
<i>toString()</i>	To String method

<b>Class:</b> <i>transfer</i>	
<b>Intention:</b> transfer class	
Methods	Intentions
<i>transfer(boolean loginStats, Map&lt;String, accounts&gt; balanceStorage, Map&lt;String, double[]&gt; acctLimit, String mode, Scanner sc)</i>	Constructor method to set the attributes
<i>transferProcess()</i>	transfer
<i>transferCheck(String input)</i>	Check if the transfer input(from account + to account + amount + name) is valid or not.

<b>Class:</b> <i>withdraw</i>	
<b>Intention:</b> withdraw class	
Methods	Intentions
<i>withdraw(boolean loginStats, Map&lt;String, accounts&gt; balanceStorage, Map&lt;String, double[]&gt; acctLimit, String mode, Scanner sc)</i>	Constructor method to set the attributes
<i>withdrawProcess()</i>	withdraw
<i>withdrawCheck(String input)</i>	Check if the withdraw input(account number + amount) is valid or not.

<b>Class:</b> <i>deposit</i>	
<b>Intention:</b> deposit class	
Methods	Intentions
<i>deposit(boolean loginStats, Map&lt;String, accounts&gt; balanceStorage, Map&lt;String, double[]&gt; acctLimit, String mode, Scanner sc)</i>	Constructor method to set the attributes
<i>depositProcess()</i>	Deposit
<i>depositCheck(String input)</i>	Check if the deposit input(account number + amount) is valid or not.

<b>Class:</b> <i>banking</i>	
<b>Intention:</b> The main system	
Methods	Intentions
<i>login(Scanner sc)</i>	Log in function
<i>modeCheck()</i>	Check if the current mode satisfied the requirement
<i>loginCheck()</i>	Check the constraints for login
<i>logout(Scanner sc)</i>	Log out function
<i>logoutCheck()</i>	Check the constraints for logout
<i>createacc(Scanner sc)</i>	Create account function.
<i>deleteacc(Scanner sc)</i>	Delete account function.
<i>deposit(Scanner sc)</i>	Deposit function.
<i>withdraw(Scanner sc)</i>	Withdraw function.
<i>transfer(Scanner sc)</i>	Transfer function.
<i>transactionCheck(String transaction)</i>	Check the transaction summary file for each line must be less than or equal to 61 characters
<i>mergeFile()</i>	Merge the temp transaction file to master transaction file
<i>readFile(String fileName)</i>	Read master account list and transaction summary file from the device
<i>updateMaster()</i>	Update the master account list file with new transactions
<i>reverseSort()</i>	Reverse sort the account number using bubble sort
<i>writeFile(String[] path)</i>	Write the updated file back to the device
<i>operation(ArrayList&lt;String&gt; accountList, ArrayList&lt;String&gt; transactionList, String[] path, Scanner sc)</i>	The operation function manages all the input command from the user and call each function based on the input
<i>main(String args[])</i>	The main function of the program.

<b>Class:</b> <i>transactionCheck</i>	
<b>Intention:</b> class to check transaction summary file	
Methods	Intentions
<i>transactionCheck(String transaction)</i>	Constructor method to set the attributes
<i>transactionCheckCons()</i>	Check the transaction summary file for each line must be less than or equal to 61 characters
<i>transactionCons2(String transaction)</i>	Check the transaction summary file for operational code
<i>transactionCons3(String transaction)</i>	Check the transaction summary file for space separation
<i>transactionCons4(String[] details)</i>	Check the transaction summary file for account number not starting with 0
<i>transactionCons5(String[] details)</i>	Check the transaction summary file for amounts between three and eight digits
<i>transactionCons6(String[] details)</i>	Check the transaction summary file for account names between 3 and 30 characters with no special letters
<i>transactionCons7(String[] details)</i>	Check the transaction summary file for unused number fill of 0
<i>transactionCons8(String[] details)</i>	Check the transaction summary file for unused string fill of *

<b>Class:</b> <i>accountOperation</i>	
<b>Intention:</b> Class for delete account and create account	
Methods	Intentions
<i>accountOperation(boolean loginStats, Map&lt;String, accounts&gt; balanceStorage, Map&lt;String, double[]&gt; acctLimit, String mode, ArrayList&lt;String&gt; tempAccountList, Scanner sc)</i>	Constructor method to set the attributes
<i>createacc()</i>	Create account function.
<i>checkAcct(String newAcct)</i>	Check if the input string(account number + name) is valid or not.
<i>isInteger(String input)</i>	Check if a string only contains integers.
<i>isAlphanumeric(String input)</i>	Check if a string only contains letters, numbers and spaces.
<i>deleteacc()</i>	Delete account function.
